Brain tumors are thought to arise when certain genes on the chromosomes of a cell are damaged and no longer function properly. These genes normally regulate the rate at which the cell divides (if it divides at all) and repair genes that fix defects of other genes, as well as genes that should cause the cell to self-destruct if the damage is beyond repair.

There were an estimated 157,803 cerebrovascular-related deaths in 2003; 138,397 of which were in people age 65 and older. Cerebrovascular disease is the most common life-threatening neurological event in the U.S. Intracranial atherosclerosis is responsible for approximately 40,000 of these attacks per year, representing 10 percent of all ischemic strokes.

Are you being reimbursed correctly for your procedures? This one-hour live online course will address the top 10 neurosurgical procedures and the correct ways to code for them.

### **AANS: Online Education - AANS Webinars: Home**

Stereotactic surgery is a minimally invasive form of surgical intervention which makes use of a three-dimensional coordinate system to locate small targets inside the body and to perform on them some action such as ablation, biopsy, lesion, injection, stimulation, implantation, radiosurgery (SRS), etc. . In theory, any organ system inside the body can be subjected to stereotactic surgery.

Will not go back, we waited over an hour and the Doctor did not review both my MRI's, especially the one needed with contrast, also did not review any of his medical history and stood upto leave after maybe 10 minutes even while I was still taking.

**Ian Pollack, MD at Children's Hospital of Pittsburgh**

The lenticulostriate arteries are a collection of small perforating arteries arising from the anterior part of the circle of Willis and supplying the basal ganglia.. They are divided into: medial lenticulostriate arteries; lateral lenticulostriate arteries ; There is, however, some confusion as to this nomenclature.

Source: IOMStudy.com from the Institute of Medicine. The Femoral Nerve arises from nerve fibers from the the L2-L3-L4 portion of the lumbar spine. The Femoral Nerve then passes down the inside edge of the thigh, past the inside of the knee and towards the ankle and foot. The Sciatic Nerve is the largest nerve in the body and it is comprised of nerves from the L4-L5-S1-S2-S3 level of the spine.
