Extractive metallurgy is the practice of removing valuable metals from an ore and refining the extracted raw metals into a purer form. In order to convert a metal oxide or sulphide to a purer metal, the ore must be reduced physically, chemically, or electrolytically.. Extractive metallurgists are interested in three primary streams: feed, concentrate (valuable metal oxide/sulphide), and ...

Hydrometallurgy is a method for obtaining metals from their ores. It is a technique within the field of extractive metallurgy involving the use of aqueous chemistry for the recovery of metals from ores, concentrates, and recycled or residual materials. Metal chemical processing techniques that complement hydrometallurgy are pyrometallurgy, vapour metallurgy and molten salt electrometallurgy.

ConspectusCarbon dioxide conversion mediated by transition metal complexes continues to attract much attention because of its future potential utilization as a nontoxic and inexpensive C1 source for the chemical industry. Given the presence of nickel in natural systems that allow for extremely efficient catalysis, albeit in an Fe cluster arrangement, studies that focus on selective CO2 ...

Le nickel est fréquemment associé au cobalt dans les dépôts miniers, il est particulièrement apprécié pour les alliages qu'il forme. Longtemps confondu avec l'argent ou le cuivre, le nickel est aujourd'hui utilisé pour la confection de monnaie et en alliage dans l'industrie. Le corps simple, métal dense blanc argenté, plus dur et plus tenace que le fer, a été isolé en 1751 à ...

Probably the most famous of the organometallic compounds is the exceedingly stable orange ferrocene, $[\text{Fe}(\text{C}_5\text{H}_5)_2]$. Its discovery in 1951 triggered an explosion in coordination chemistry, and the subsequent preparation of thousands of new organometallic compounds. Ferrocene consists of two planar, five-membered rings sandwiching an iron atom between them.
