Real-time strategy (RTS) is a sub-genre of strategy video games in which the game does not progress incrementally in turns. This is distinguished from turn-based strategy (TBS), in which all players take turns when playing.. In an RTS, the participants position and maneuver units and structures under their control to secure areas of the map and/or destroy their opponents' assets.

Section 3-5 : Lagrange Multipliers. In the previous section we optimized (i.e. found the absolute extrema) a function on a region that contained its boundary. Finding potential optimal points in the interior of the region isn't too bad in general, all that we needed to do was find the critical points and plug them into the function.
